RE: Quarterly Report: Underground Recovery System

Dear Jim:

Please find included the laboratory Data Sheets through 13 January 1996.

1A. Sampling and Testing:

Wells 1 & 2 are combined for sampling with Well 7 is sampled separately. The results of these samples are to be combined for a mathematical average technique using the flow as a weighted function. The original EPA contacts and the BCM laboratory coordinated sampling and test methods to assure compliance.

Total Influent = {[Wells1&2Contaminate x Wells1&2Flow] + [Well7Contaminate x $Well_7$Flow]}/Total Flow

1B. Data:

The following is the BCM data received currently:

Trichloroethylene

DATE	INFL. 1+2	INFL. 7	TTL INFL.	TWR EFL.	DIS. EFL.	WH1	WH2
2/6/95	290.0	970.0	380.7	1.1	<1.0	42.0	<1.0
