Gentlemen:

Recently we were informed by Mr. Malcolm Berlind, Plant Engineer, that difficulties have arisen in regards to an anionic type of detergent filtering into a nearby well.

In view of the fact that our Esbec # 1 cleaner which you use in your barrel finishing department contains such a detergent, it is felt that this material may be the source of the problem.

In order to alleviate this condition, we propose that we substitute our Esbec # 4 cleaner in place of Esbec # 1. Being free from a detergent of any type, we believe that the chemicals contained in it will filter out in your lagoon.

Performance wise, it should give you the same results as you are now obtaining with Esbec # 1. If you so desire, we would be willing to replace your present stock of Esbec # 1 with Esbec # 4 free of charge.

In order for you to evaluate the chemicals in our compounds that you now use, the following is a breakdown of the materials they contain.

Esbec # 1	Esbec # 200	Esbec # 4
Waconnol DB → 7% + approx 5% Wetting Agent	Granulated Soap	Light Soda Ash
Sodium Tripolyphosphate	Sodium Tripolyphosphate	Sodium Meta Silicate
Light Soda Ash	Modified Soda	Tetra Sodium Pyrophosphate
Blue Dye	Green Dye	Tri Sodium Phosphate

We hope this will be of value to you and please feel free to call upon us if further information is required.

Very Truly Yours,

4820001

Clifford G. Carter
Supt. of Finishin
