Mr. Russell H. Wyer, Director
Hazardous Site Division
U.S. EPA
Washington, D.C. 20460

Almost two years ago I was made "aware" of the exisitence of Keystone Landfill and its potential problems. Now I am convinced that it (Keystone) is a real hazard!! to our Community.

I have been an active member of P.A.C.E. I am proud to say - I have also attended a meeting with P.A.C.E. and DER in Pennsylvania, I have listened to EPA's presentation at Charles Carroll School (Silver Run, Md.) —

GINAL
ed)

After all these meetings, listening to all the "facts" I do not understand why Keystone Landfill has been allowed to operate without compliance ~~with~~ the State laws? — I fully understand that when the landfill was built there were no "regulations" — but ~~does~~ the officials agree that it (Keystone) has problems — therefore the regulations should be enforced now — to hopefully clean-up the Keystone landfill for the future.

There are so many unknowns existing about contaminated water and land. I do not want to be testing satistic!! We need help and we should not have to look any further because we have our government to protect us!! Please DO NOT allow Keystone to expand — the problem is insurmountable!! now!

(2)

Therefore if EPA keeps Keystone on their Superfund list as a priority site, I feel that the possible-probable expansion would be effected!

Please don't let our community down — our faith in our government — we can't remedy this situation alone!

Sincerely,
Cynthia A. Lyons
