NOVAK SANITARY LANDFILL
WATER AND SOIL SAMPLES FROM
LEACHATE DRAINAGE WAYS
SET TWO

DATA VALIDATION SUMMARY

Introduction

This report presents the data validation of sample analysis for Novak Sanitary Landfill water and soil samples. On June 27 and July 26, 1990, three water samples and three soil samples were taken from the Leachate Drainage Ways at the Novak Sanitary Landfill. These samples were submitted to National Environmental Testing, Inc., Cambridge Division (NET) for analysis of Volatile Organic Compounds (VOCs), base, neutral, and acid extractable organic compounds (semivolatiles or BNAs), pesticides and polychlorinated biphenyls (PCBs), total metals (selected list), and selected inorganic wet chemistry parameters. Refer to Table 1 below for the identities of the specific samples and the parameters/methods requested.

The samples collected on July 26, 1990 for VOCs analysis were a resampling of samples originally collected on June 27, 1990. Resampling was necessary because holding times for VOCs were exceeded by the laboratory.

Samples were received at NET on June 28 and July 27, 1990. Three Chain of Custody (COC) forms were supplied with the two sample groups; however, none was signed by a

representative of NET. The laboratory was contacted and asked to provide copies of signed COCs.

The deliverables for volatile organics, semivolatile organics, and pesticides/PCBs were evaluated using EPA Laboratory Data Validation Functional Guidelines for Evaluating Organics Analyses, Modified for Region III, June 1988. The deliverables for metals and cyanide were evaluated using EPA Laboratory Data Validation Functional Guidelines for Evaluating Inorganics Analyses, Modified for Region III, June 1988. Conventional analyses were evaluated for holding time compliance and were reviewed for adherence to quality control procedures specified for each method. All data have been tabulated and have been assigned appropriate qualifier codes by the data reviewer. Please refer to Tables 2 through 12 for lists of compounds analyzed, reported concentrations, and the appropriate qualifier codes.

Table 1. Summary of Samples Collected and Parameters Analyzed at the Leachate Drainage Ways, Novak Sanitary Landfill

Sample #	Sample ID	Sample Date	VOCs 1/	BNAs	Metals	Cyanide	Pesticides /PCBs	Classical Inorganics
1	NSL-LH-10-01	6/27/90		X	X	X	X	X
2	NSL-SS-10-01	6/27/90		X	X	X	X

Summary of Data Validation

All quality control parameters have been separately evaluated and summarized on individual "Data Validation Summary Report" forms (DVSR forms). These DVSR forms are presented along with the pertinent "raw" and "reduced" data provided by the laboratory in subsequent sections of this report. The following comments have been taken from each DVRS form and are separated by parameters. These comments identify the uncorrectable deficiences:

ORGANICS (Volatiles, Semivolatiles, and Pesticides/PCBs)

1.0 Holding Times

All samples were prepared and/or analyzed within holding times as established under 40 CFR, Chapter 136 for VOCs, BNAs, and Pesticides/PCBs.

2.0 GC/MS Tuning and Performance

All ion abundance criteria were met, mass spectra were of good quality, and Form V was present for each 12-hour period.

3.0 Pesticide/PCB Instrument Performance

All criteria were met.

4.0 GC/MS Calibration

4.1 Volatiles

Two instruments were used to analyze the samples for volatile organic compounds.

4.1.1. Initial Calibration

Instrument HP5970K was initially calibrated on July 24, 1990. Relative response factors (RRF) for all compounds were greater than the minimum requirement of 0.05; however, three compounds were reported to have percent relative standard deviation (% RSD) exceeding the control limit of 30%. These compounds are acetone at 45.2 %RSD, 1,2-dichloroethane at 40.6 %RSD and vinyl acetate. The following samples were affected: LH1002, SS1002R, and the trip blank (TB).

Action Taken: For sample LH1002, the result for acetone (44 ug/L) was flagged "J" as estimated, while the results for 1,2-dichloroethane (<5 ug/L) and vinyl acetate (<10 ug/L) were flagged "UJ" as estimated undetected. For both sample SS1002R and the trip blank, the results for acetone (<10 ug/L) 1,2-dichloroethane (<5 ug/L) and vinyl acetate (<10 ug/L) were each flagged "UJ" as estimated undetected.

Instrument HP5995D was initially calibrated on July 8 and again on August 1, 1990, when analyses were performed. In both instances, relative response factors for all

compounds were greater than the minimum requirement of 0.05. All compounds were reported to have %RSDs of less than 30%, with the exception of bromomethane, which was reported to have %RSD of 98.9% on July 8 and %RSD of 67.8% on August 1, 1990. The following samples were affected: SS1002 and SD902.

Action Taken: Neither sample SS1002 nor sample SD902 was reported to contain bromomethane. Thus, the results for bromomethane in sample SS1002 (< 14 ug/kg) and in sample SD902 (< 12 ug/kg) were flagged "UJ" as estimated undetected.

4.1.2 Continuing Calibration

Continuing calibrations were performed on instrument HP5970K on July 30 and August 1, 1990, when analyses were performed. All compounds were reported to have percent differences (%D) of 25% or less on both dates, with the exception of 1,2-dichloroethane on July 30, 1990, which had a %D of 29.6%. Sample LH1002 and the trip blank were affected.

Action Taken: Because the results for this compound in the two affected samples had already been flagged "UJ" (due to the %RSD for 1,2-dichloroethane exceeding 30% in the initial calibration on July 24), no further action was required.

A continuing calibration was performed on instrument HP5995D on July 30, 1990, when analyses were performed. All compounds were reported to have %D of 25% or less, with

the exception of bromoform, which was reported to have a %D of 29.3%. Samples SD902 and SS1002 were affected.

Action Taken: In the case of both samples SD902 (<6 ug/kg) and SS1002 (<7 ug\kg), no bromoform was reported to have been detected. Thus, the result for each is flagged "UJ" as estimated undetected.

4.2 Semivolatiles

Two instruments were used to analyze the samples: instrument HP5970F and instrument HP4970J.

4.2.1 Initial Calibration

Instrument HP5970F was initially calibrated on July 9, 1990. Relative response factors for all compounds were greater than the minimum requirement of 0.05, and all compounds were reported to have %RPD of less than 30%.

Action Taken: No compounds affected; no action was required.

Instrument HP4970J was initially calibrated on July 5, 1990. Relative response factors for all compounds were greater than the minimum requirement of 0.05. Two compounds, however, were reported to have %RSD of greater than 30%: benzoic acid (43.9 %RSD) and 2,4-dinitrophenol (38.1 %RSD). Only sample LH1001 was affected.

Action Taken:

The results for benzoic acid (460 ug/L) and 2,4-dinitrophenol (<250 ug/L) in sample LH1001 were flagged "J" and "UJ", respectively.

4.2.2 Continuing Calibration

Continuing calibrations were performed on instrument HP5970F on July 23 and July 30, 1990, when analyses were performed. All compounds were reported to have percent differences of 25% or less, in both instances with the exception of 2,4-dinitrophenol (28.2 %RSD) and 4,6-dinitro-2-methylphenol (94.2 %RSD) when analyzed on July 23, 1990. The following samples were affected: SD901, SS1001, and SS1001R.

Action Taken: All results for 2,4-dinitrophenol and 4,6-dinitro-2-methylphenol for samples SD901, SS1001, and SS1001R were flagged "UJ" as estimated undetected.

Continuing calibrations were performed on instrument HP5970J on July 11 and July 27, 1990, when analyses were performed. All compounds for which calibrations were performed on July 11 were reported to have percent differences of 25% or less with the exception of 3,3'-dichlorobenzidine, which had %D of 26.9%. Only sample LH1001 was affected. For the continuing calibration performed on July 27, the following compounds were reported to have %D of greater than 25%: pyrene (42.3%D), benzo(k) fluoranthene (31.5 %D), and benzo (ghi), perylene (32.0 %D). Only sample LH1001 was affected.

Action Taken: The result for sample LH1001 for 3,3'-dichlorobenzidine (< 100 ug/L), pyrene (<50 ug/L), benzo (k) fluoranthene (<50 ug/L) and benzo (ghi) perylene (<50 ug/L) were each flagged "UJ" as estimated undetected.

5.0 Pesticides/PCB Instrument Performance and Calibration

All DDT retention times were greater than or equal to 12 minutes; all retention time windows were reported and were acceptable; however, the 4,4'-DDT degradation was out of control limits for the second standard. Samples LH1001 and SS1001 were affected. A retention time shift for DBC was out of control limits for samples LH1001 and SS1001. Lastly, calibration curves were used in the determination of DDT, DBC, aldrin, and endrin. Curves were acceptable.

Action Taken: All results were below the detection limit; no action was taken.

6.0 Method Blanks

The contaminants detected in method blanks, i.e., compounds identified in the blanks at concentrations less than 5X (non-common contaminants) or 10X (common lab contaminants) the amount seen in the blanks, are qualified according to the Functional Guidelines as shown below.

6.1 Volatiles

6.1.1 Method Blank VBLK73090K

This method blank was reported to contain methylene chloride at 1 ug/L and tetrachloroethene at 2 ug/L. Sample NSLLH1002 and the trip blank were affected. Sample NSLLH1002 was reported to contain methylene chloride at 2 ug/L and tetrachloroethene at 1 ug/L, while the trip blank was reported to contain methylene chloride at 6 ug/L and tetrachloroethene at 1 ug/L.

Action Taken: The results for methylene chloride and tetrachloroethene in sample NSLLH1002 and the trip blank were flagged "B" (presence qualitatively noted but not detected substantially above the level reported in laboratory or field blanks), as they are below 10X and 5X the amounts detected in the blank (10 x 1 ug/L = 10 ug/L methylene chloride and 5 x 2 = 10 ug/L tetrachloroethene), respectively.

6.1.2 Method Blank VBLK7030D

This method blank was reported to contain toluene at 2 ug/L. No toluene was detected, however, in the relevant sample (NSLSD902).

Action Taken: No action was taken, in accordance with the Functional Guidelines.

6.1.3 Method Blank VBLK80190D

This method blank was reported to contain methylene chloride at 1 ug/L and toluene at 1 ug/L. The sample affected, NSLSS1002, was reported to contain methylene chloride at 3 ug/L and toluene at 2 ug/L.

Action Taken: These results were flagged "B" (presence qualitatively noted but not detected substantially above the level reported in laboratory or field blanks), as the results are each less than 10X the amounts detected in the blank (10 x 1 ug/L = 10 ug/L methylene chloride and 10 x 1 ug/L = 10 ug/L toluene).

6.1.4 Method Blank VBLK80190K

This method blank was reported to contain methylene chloride at 2 ug/L, 1,1,2,2,-tetrachloroethane at 2 ug/L, and toluene at 1 ug/L. None of these compounds was detected in the relevant sample (SS1002R).

Action Taken: No action was taken, in accordance with the Functional Guidelines.

6.2 Semivolatiles

6.2.1 Method Blank SBLK70390J

No contaminants were detected in this blank.

6.2.2 Method Blank SBLK70690F

This method blank was reported to contain naphthalene at 63 ug/kg, di-n-butylphthalate at 560 ug/kg, butylbenzyl-phthalate at 670 ug/kg, and bis(2-ethylhexyl)phthalate at 93 ug/kg. The "phthalate" compounds are common laboratory contaminants. The affected samples were NSLSD901 and NSLSS1001. Sample NSLSD901 was reported to contain di-n-butylphthalate at 1700 ug/kg and butylbenzylphthlate at 240 ug/kg. Sample NSLSS1001 was reported to contain naphthalene at 410 ug/kg, di-n-butyl phthalate at 1500 ug/kg, butylbenzylphthalate at 120 ug/kg, and bis(2 ethyl-hexyl)phthalate at 1200 ug/kg.

Action Taken: The result for naphthalene in sample NSLSS1001 was flagged "J" by the laboratory because the amount detected was less than the quantitation limit but greater than 5X the amount found in the blank (5 X 63 ug/L = 315 ug/kg naphthalene). The results for di-n-butylphthalate for both samples (NSLSD901 and NSLSS1001) were flagged "B", as the amounts found were greater than the quantitation limit but less than 10X the amount detected in the blank (10 x 560 ug/kg = 5600 ug/kg di-n-butylphthalate). The results for butylbenzylphthalate for both samples (NSLSD901 and NSLSS1001) were flagged "B" as the amount detected in each was less than the quantitation limit and less than 10X the amount detected in the blank (10 x 670 ug/kg = 6700 ug/kg butylbenzylphthalate). The result for bis(2-ethylhexyl)phthalate was not flagged, as the amount detected in the samples was greater than 10X that detected in the blank (10 x 93 ug/kg = 930 ug/kg bis(2-ethylhexyl)phthalate).

6.2.3 Method Blank SBLK70390F

No contaminants were detected in this blank.

6.3 Pesticides/PCBs

No contaminants were detected in the blanks.

7.0 Field Blanks

7.1 Volatiles

One field blank (SS1002R), an equipment rinsate, was collected and applies to all samples analyzed for volatiles. As no contaminants were detected in this blank, no action was taken on the corresponding sample data.

7.2 Semivolatiles

One field blank (SS1001R) was collected and applies to all samples analyzed for semivolatiles. As no contaminants were detected in this blank, no action was taken on the corresponding sample data.

7.3 Pesticides/PCBs

No contaminants were detected in this blank.

8.0 Trip Blanks

One trip blank was analyzed and applies to all samples analyzed for VOCs. This trip blank was reported to contain methylene chloride at 6 ug/L, tetrachloroethene at 1 ug/L, and toluene at 5 ug/L.

Action Taken: These compounds have previously been flagged "B" because of their presence in low levels in the relevant method blanks; thus, no further action was taken.

9.0 GC/MS Surrogate Recovery

All surrogate recoveries for volatile organic compounds were within quality control limits. For the semivolatile compounds, two samples had recoveries which exceeded the control limit for D5-phenol. Since only this one compound was outside the control limit, the data is considered acceptable in accordance with the guidelines.

10.0 Pesticides/PCBs Surrogate Recovery

All surrogate recoveries were within quality control limits.

11.0 Matrix Spike/Matrix Spike Duplicate

11.1 Volatiles

The sample-specific matrix spike and matrix spike duplicate for water were reported to have recoveries of 130% and 159% for toluene, respectively. These values exceed the upper quality control limit of 125% established for this compound. All other compounds were found to be within limits for both recoveries and relative percent difference (RPD). The matrix spike and matrix spike duplicate recoveries for soil were within the quality control limits established for each compound; however, the RPD for 1,1-dichloroethene was 27%, exceeding the desired limit of 22%. In addition, the soil spikes were not sample specific; i.e., they were performed on samples from some source other than Novak.

Action Taken: No action was taken on the analytical results as matrix spike results are advisory only. However, it does suggest the potential high bias of the results for toluene.

11.2 Semivolatiles

The recoveries for both the matrix spike and matrix spike duplicate for water were all within quality control limits, although the RPD for 1,4-dichlorobenzene of 34% exceeded the control limit of 28%. The recoveries for both the matrix spike and matrix spike duplicate for soil were all within quality control limits, as were the RPDs. In the case of both water and soil, batch-specific samples were spiked.

Action Taken: No action was taken on the analytical results, as the evaluation is advisory only.

11.3 Pesticides/PCBs

The laboratory did not analyze a sample-specific matrix spike or matrix-spike duplicate with the pesticides analysis. Instead, the matrix spike and matrix spike duplicate were batch-specific. Also, the percent recovery of the gamma-BHC spike was out of control limits for the reagent water spike.

Action Taken: Although recoveries of batch-specific matrix spikes and matrix spiked duplicates are acceptable, no evaluation of matrix effects may be inferred. However, no action was taken on the analytical results, as the evaluation is advisory only.

12.0 Field Duplicates

No field duplicates were sampled on site.

13.0 Internal Standards Performance

All criteria were met. All internal standard counts were within -50% or +100% of the associated standard.

14.0 Compound Identification

The relative retention time did not exceed +/- 0.06 units of the RRT standard for any samples with the exception of benzoic acid reported in sample NSLLH1001, in which the relative retention time differed by 0.09 units. Because the chromatogram and mass spectra for this compound appeared to be in order and to confirm its presence, the slight exceedance of the relative retention time control limit was believed to be minimal in effect. No action was taken.

15.0 Compound Quantitation and Reported Detection Limits

All criteria were met. All sample results were correctly calculated and CRQLs were correctly determined.

16.0 Tentatively Identified Compounds

Tentatively identified compounds were identified in semivolatile analyses only. All criteria were met. A library search was completed.

INORGANICS (METALS, CYANIDE, WET CHEMISTRY)

1.0 Holding Times

All holding times were met for all parameters as specified under 40 CFR 136 except for fluorides, chlorides, nitrate/nitrite, and sulfates, which were analyzed past holding times.

Action Taken: Results for sample LH1001 for fluorides, chlorides, nitrate/nitrite, and sulfates have been qualified "L" as biased low.

2.0 Calibration Curves

All ICP curves were obtained using a one-point standard plus a blank. All other curves were three- to five-point curves with the lowest standard at the limit of quantitation (LOQ). All of the criteria were met.

3.0 Initial and Continuing Calibration Verification

All criteria were met.

4.0 Laboratory Blanks (Method and Calibration)

Contaminants were detected in the method blank and calibration blanks. Parameters detected, as well as the concentration of the contaminant and the 5X concentration of the

contaminant, are listed in Table 13. Results that are greater than IDL but less than 5X the amount of contaminant in the blank are flagged "B."

Action Taken: The results for the following samples and parameters are flagged "B" for blank contamination: LH1001, silver; SS1001R, calcium, silver, sodium, and zinc; SS1001, nickel; and SD901, nickel.

5.0 Field Blank (Rinsate)

A rinsate blank created in the field was analyzed. The table below lists the contaminants found, the concentration detected, and the 5X limit. The functional guidelines for Region III specify that if the result is greater than the IDL but less than 5X the blank concentration, the result is flagged "B."

Parameter	Field Blank Conc. (ug/L)	5X Blank Value Aqueous (ug/L)	5X Blank Value Soil (ug/g)
Calcium	561	2805	468
Copper	10.3	51.5	8.44
Iron	192	960	154
Manganese	7.4	37	6.07
Silver	9.4	47	7.7
Sodium	367	1835	301
Zinc	22.2	111	18.2

Action Taken: The following samples and parameters are flagged "B": SS1001, silver and sodium; SD901, calcium, silver and sodium. The result for silver in sample LH1001 has already been qualified as "B" for contamination by the method blank.

6.0 ICP Interference Check Samples

All criteria were met.

7.0 Laboratory Control Sample

The percent recoveries for the following compounds were outside of control limits:

Matrix	Compound	% R	QC Limits
Soil	Barium	243.8	80 - 120
Soil	Potassium	751.4	80 - 120

Action Taken: The soil sample results of SS1001 and SD901 for barium and potassium were flagged "K" as biased high.

8.0 Laboratory Duplicates

The laboratory did not analyze sample-specific duplicates for the soil samples submitted. Therefore, the precision of the analytical system or sample homogeneity cannot be determined. Also, the laboratory analyzed the rinsate blank as a duplicate, which is not an acceptable measure of the instrument reproducibility.

Action Taken: None.

9.0 Matrix Spike

For aqueous samples, the percent recoveries for the following parameters were outside of control limits:

Element	% R	Control Limits
Arsenic	71	75 - 125
Lead	43.8	75 - 125

For soil samples, the percent recoveries for the following parameters were outside of control limits:

Element	% R	Control Limits
Antimony	131.8	75 - 125
Arsenic	46	75 - 125
Barium	47	75 - 125
Beryllium	48.5	75 - 125
Cadmium	41.4	75 - 125
Chromium	37.6	75 - 125
Cobalt	50.6	75 - 125
Copper	49.4	75 - 125
Lead	245.3	75 - 125
Manganese	2.6	75 - 125
Nickel	48.8	75 - 125
Selenium	52.5	75 - 125
Silver	59.7	75 - 125
Thallium	52.6	75 - 125
Vanadium	38.6	75 - 125
Zinc	40.3	75 - 125

Action Taken: For samples LH1001 and SS1001R, results for arsenic and lead are qualified "L" as biased low. For samples SS1001 and SD901, results for arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, nickel, selenium, silver, thallium, vanadium, and zinc are qualified "L" as biased low. All results for lead and antimony are qualified "K" as biased high. All results for manganese are qualified "R" as unusable.

The following elements were not analyzed in the matrix spike for soils: aluminum, calcium, magnesium, potassium, and sodium.

10.0 Furnace AA QC

A description of each sample evaluation is presented below.

Batch 1 - Water

Arsenic

NSL-LH-10-01	Burn 1	Burn 2	Mean	%R	%RSD	Value
Sample	42.3	41.9	42.1	--	0.67	42.1
Spike	56.1	56.9	56.5	72	1.0	--

- Sample result is >CRDL, and %RSD is <±20% (acceptable).
- Sample concentration is >50% of spike concentration.
- Spike %R is > 40% but is < 85 - 115% (not acceptable).
- MSA required: MSA was performed but Corr. Coeff. <0.995; flag data as estimated "J".

NSL-SS-10-01R	Burn 1	Burn 2	Mean	%R	%RSD	Value
Sample	0.30	-0.40	0.05	--	989.8	0.05
Spike	17.5	18.6	18.05	90.1	4.31	--

- Sample result is <CRDL, RSD criteria not applicable.
- Sample concentration <50% of spike, no effect.
- Spike concentration acceptable.
- No flags.

Lead

NSL-LH-10-01	Burn 1	Burn 2	Mean	%R	%RSD	Value
Sample	71.1	69.1	70.1		2.02	701.0
Spike	75.4	75.5	75.45	53.5	0.09	754.0

- Sample result is >CRDL; RSD <±20% - acceptable.
- Sample concentration >50% of spike.
- Spike concentration outside 85 - 115%R limits, MSA required
- MSA performed; MSA acceptable, No flags.

NSL-SS-10-01	Burn 1	Burn 2	Mean	%R	%RSD	Value
Sample	4.1	3.4	3.75	-	13.2	3.75
Spike	11.7	11.4	11.55	7.81	--	--

- Sample result >CRDL, RSD <±20% acceptable.
- Sample concentration <50% of spike.
- No MSA required.
- Spike concentration <85 - 115%, flag data "L" as biased low.
  (Note: Lead was previously flagged "K" in this sample for high matrix spike recovery. Because the "L" flag contradicts the "K" flag, the flag is changed to "J" to indicate the value is estimated but the direction of the bias is uncertain.)
- MSA run but not required.

Lead

NSL-LH-10-01	Burn 1	Burn 2	Mean	%R	%RSD	Value
Sample	2.3	1.8	2.05		17.24	2.05
As	6.4	6.0	6.2	41.5	4.56	6.2

- Sample result >CRDL, RSD <±20%.
- Sample result <50% spike, no MSA required.
- Spike recovery <85% - 115%R.
- Flag data "L" as biased low.

Selenium

NSL-SS-10-10R	Burn 1	Burn 2	Mean	%R	%RSD	Value
Sample	-0.6	0.3	-0.15	-	424.2	-0.15
Spike	9.9	8.9	9.4	94.0	7.52	9.4

- Sample result <CRDL, RSD criteria not applicable.
- Sample result < 50% spike concentration
- Spike concentration acceptable
- No flags.

Thallium

NSL-LH-10-01	Burn 1	Burn 2	Mean	%R	%RSD	Value
Sample	0.6	0.3	0.45		47.13	0.45
Spike	19.0	20.7	19.85	97%	6.05	19.85

- Sample result < CRDL, RSD criteria not applicable.
- Sample result < 50% of spike result.
- Spike concentration between 85% - 115%R.
- No flags.

NSL-SS-10-01R	Burn 1	Burn 2	Mean	%R	%RSD	Value
Sample	-0.10	0.20	0.05	--	424.2	0.05
Spike	25.5	24.3	24.9	124.25%	3.41	24.9

- Sample result <CRDL, RSD criteria not applicable.
- Sample result <50% of spike result.
- Spike concentration >115% - flag data K, as biased high.

Batch 2 - Soils

Antimony

NSL-SS-10-01	Burn 1	Burn 2	Mean	%R	%RSD	Value
Sample	-1.2	2.3	0.55		449.9	1.90
Spike	149.6	149.6	149.6	124.67	0	149.6

- Sample result <CRDL, RSD Criteria not applicable.
- Sample result < 50% of spike result.
- Spike result > 115%R, flag K, as biased high.

NSL-SD-901	Burn 1	Burn 2	Mean	%R	%RSD	Value
Sample	-0.3	-0.9	-0.6		71.7	8.0
Spike	119.6	119.4	119.5	99.5	0.12	119.5

- Sample result < CRDL, RSD Criteria not applicable.
- Sample result < 50% of spike result
- Spike result acceptable.
- No flags.

Arsenic

NSL-SS-10-01	Burn 1	Burn 2	Mean	%R	%RSD	Value
Sample	40.4	34.9	37.6		10.3	37.6
Spike	59.30	51.4	55.3	88.5	10.09	55.35

- All criteria met - No flags required.

NSL-SD-9-01	Burn 1	Burn 2	Mean	%R	%RSD	Value
Sample	32.5	32.8	32.65	0	.65	32.65
Spike	50.5	51.5	51.0	91.75	1.39	51.0

- All criteria met - No flags required.

Lead

NSL-SS-10-01	Burn 1	Burn 2	Mean	%R	%RSD	Value
Sample	112.8	119.2	116.0		3.9	116.0
Spike	118.8	117.2	118.0	20	0.96	118.0

- Sample result > CRDL, RSD < ±20% (acceptable).
- Sample result > 50% of spike result; MSA required.
- Spike %R < 85%.
- MSA not done, but sample rerun on dilution.

	Burn 1	Burn 2	Mean	%R	%RSD	Value
Sample	22.2	20.5	21.35		5.63	106.75
Spike	31.3	29.3	30.3	89.5	4.67	151.5

- All criteria met, no flags required.

NSL-SD-9-01	Burn 1	Burn 2	Mean	%R	%RSD	Value
Sample	80.6	79.4	80.0		1.06	80.0
Spike	85.8	85.8	85.8	58.0	--	85.8

- Sample result >CRDL, RSD <±20% (acceptable).
- Sample result >50% of spike result, MSA required.
- Spike %R < 85%.
- MSA performed twice - Correlation Coefficient not acceptable.
- Flag data as estimated "J"

Selenium

NSL-SS-1001	Burn 1	Burn 2	Mean	%R	%RSD	Value
Sample	0.9	0.7	0.8		17.67	0.8
Spike	9.7	8.9	9.3	85	6.08	9.3

- All criteria met, no flags required.

NSL-SD-9-01

- All criteria met, no flags.

Thallium

NSL-SS-10-01

- All criteria met, no flags required.

NSL-SD-9-01

- All criteria met, no flags required.

11.0 ICP Serial Dilutions

Calcium results were out of control limits, but all other criteria were met. Samples affected are SS1001 and SD901.

Action Taken: The results for calcium are qualified as estimated and flagged "J".

12.0 Summary

12.1 Organics

NSL-LH-10-01

COMPOUND	CODE	QA FAILURE
Benzoic Acid	(J)	%RSD failure on initial calibration
2,4-Dinitro phenol	(UJ)	%RSD failure on initial calibration
3,3'-Dichlorobenzidine	(UJ)	%D failure on continuing calibration
Pyrene	(UJ)	%D failure on continuing calibration
Benzo(k)fluoranthene	(UJ)	%D failure on continuing calibration
Benzo (ghi) perylene	(UJ)	%D failure on continuing calibration

NSL-SS-10-01

COMPOUND	CODE	QA FAILURE
2,4-Dinitrophenol	(UJ)	%D failure on continuing calibration
4,6-Dinitro-2-methyl phenol	(UJ)	%D failure on continuing calibration
Naphthalene	(J)	Laboratory Flag
Di-n-butylphthalate	(B)	Method blank contaminant
Butylbenziphthalate	(B)	Method blank contaminant
Benzoic acid	(J)	Lab Flag
Phenanthrene	(J)	Lab Flag
Anthracene	(J)	Lab Flag
Benzo (a) anthracene	(J)	Lab Flag
Benzo (b) Fluoranthene	(J)	Lab Flag
Benzo (k) Fluoranthene	(J)	Lab Flag
Benzo (a) pyrene	(J)	Lab Flag
Indeno (1,2,3-Cd) pyrene	(J)	Lab Flag
Benzo (g,h,i) perylene	(J)	Lab Flag

NSL-SD-9-01

COMPOUND	CODE	QA FAILURE
2,4-Dinitrophenol	(UJ)	%D failure on continuing calibration
4,6-Dinitro-2-methylphenol	(UJ)	%D failure on continuing calibration

		n-nitrosodimethylamine	36
Unknown #4	9	None found	--
Unknown #5	8	4-methylhexanoic acid	51
		butanoic acid anhydride	24
		2-propenamide	15
		tetrahydro-2-furanmethanamine	15
		butanoic acid, methyl ester	11
		isocyanatoethane	11
Unknown #6	21	cyclohexanecarboxylic acid	24
		2-ethyl-hexanoic acid	11
		1-propene, 1-(methylthio)-(Z)-	11
		1,4-dioxane	11
		1-propene, 1-(methylthio)-(E)-	11
Unknown #7	7	1,3-pentanediol, 2,2,4-trimethyl-	86
		2-azetidinone, 3,3-dimethyl-	25
		1,3-propanediol, 2,2-dimethyl-	15
		butane, 2,2,3-trimethyl-	11
Unknown #8	15	1,3,5-cycloheptatriene	34
		benzeneacetic acid	20
		spiro[3,3]hepta-1,5-diene	20
		propanedioic acid, phenyl-	20

	Conc.(ug/L)	Probable Compounds	Probability (%)
Unknown #9	19	benzoic acid, 4-methyl-	93
		benzoic acid, 3-methyl-	88
		benzoic acid, 2-methyl-	63
		benzeneacetic acid	59
		propanedioic acid, phenyl-	51
		benzene, (2-methoxyethyl)-	36
		benzene, (1-nitropropyl)-	31
Unknown #10	6	6-octen-1-ol, 7-methyl-3-methylene-	25
		bicyclo[3.1.0]hex-3-en-2-one, 4-methyl-1-(1-methylethyl)-	11
Unknown #11	15	2,4-hexadiene, 3-methyl-	26
		2,4-hexadiene, 2-methyl-	26
		cyclopentene, 1,5-dimethyl-	20
		cyclohexene, 4-methyl-	20
		2,4-heptadiene, (E,E)-	20
		2,4-nonadienal, (E,E)-	15
		1H-imidazole, 2-ethyl	15
Unknown #12	4	cis-terpin hydrate	52
		1-propanamine	25
		silane, trimethyl-	25
		guanidine	15
		5-hexyn-3-ol	15
		2-pentanol, 2,4-dimethyl-	15
		oxirane, tetramethyl-	15
Unknown #13	10	phosphonic acid, bis(1-methylethyl) ester	25
		cyclopentane, 1-ethyl-1-methyl-	13
Unknown #14	11	benzene, methyl(1-methylethyl)-	58
		benzene, 1-methyl-3-(1-methylethyl)-	47
		benzene, 1-methyl-2-(1-methylethyl)-	47
		1-chloromethyl-3,5-dimethylbenzene	37
		[1,2,4]triazolo[1,5-a]pyridine	33
		cyanic acid, phenyl ester	31
		benzene, (1,1,2-trimethylpropyl)-	29
Unknown #15	6	benzene, (1-methyl-3-butenyl)-	32
		benzene, 1-methyl-4-(4-methyl-4-pentenyl)-	20

	Conc.(ug/L)	Probable Compounds	Probability (%)
Unknown #16	3	2-pentene, 5-bromo-2,3-dimethyl-	18
		bicyclo[3.1.1]heptan-3-one, 2,6,6-trimethyl	18
		2-octen-4-one, 2-methyl-	15
		2-pentene, 4,4-dimethyl-	12
		3-hexen-2-one	12
		cyclopropane, 1,1,2,2-tetramethyl	11
		2-pentene, 4,4-dimethyl-, (Z)	11
Unknown #17	5	cyclopropane, 1-(1-methylethyl)-2-(2-methyl-1-methylenepropyl)-	36
		ethanone, 1-(1-methyl-2-cyclopenten-1-yl)-	36
		2,4-octadienal, (E,E)-	32
		bicyclo[2.2.1]heptan-2-one, 1,3,3-trimethyl-	31
		2,4-decadienal, (E,E)-	25
		2,4-nonadienal	25
		2,4-nonadienal	20

RE: Data Package for Novak Site

Dear Ms. Baron:

Enclosed please find the data package for samples from the Novak site recieved at our facility June 28th and July 27th. Samples received on June 28th were logged-in as NET work order 9006403 for ABN's, VOA's, pesticides, metals and inorganics. Samples received on July 27th were logged-in as NET work order 9007305 for VOA analysis. These latter samples were performed as a result of missed holding times for the VOA samples in case 9006403.

Soil and aqueous sample results are reported together in the ABN and VOA packages. The metals analysis for soil and aqueous samples are reported in separate packages.

No unusual occurrences were reported for the inorganics analysis.

The matrix spike and duplicate samples for the aqueous VOA analysis showed high recoveries and RPD for toluene. Batch QC is provided for soil VOA samples.

The associated aqueous blank for the ABN analysis showed trace contamination of phthalate and naphthalene. Both were below the action limits according to the EPA's CLP SOW. One acid surrogate was out of CLP control limits in samples NSLLH1001 and NSLSS1001R. Sample NSLSS1001R was extracted for base neutrals only. Batch QC is supplied for both soil and aqueous samples.

Several continuing calibration standards failed to meet the percent difference requirements due to matrix carryover from samples not associated with this case.

NET

The aqueous package for metals shows the duplicate analysis is out of control limits for iron. Inability to homogenize the particulate portion of the sample is believed to be responsible. Arsenic and lead digestion spike recoveries were out of control limits. The IDL for mercury was raised due to the necessity of using a reduced sample volume. The field blank was used for the cyanide spike.

Digestion spike recoveries, for the soil samples, were all out of control windows except for mercury and cyanide. The post digestion spike showed excellent recoveries except for manganese. This indicates probable matrix interference. Aluminum and lead duplicates were out of control limits.

If you have any questions regarding this data package, or any other matter, please do not hesitate to call.

Sincerely,

D. Wesley Miller
Project Manager

Inorganic CLP SOW 7/87 Data Qualifiers

Form I-IN includes fields for three types of result qualifiers.

- C Qualifier - (concentration qualifier)

  " B " - If the reported value is less than the Contract Required Detection Limit (CRDL), but greater than the Instrument Detection Limit (IDL).

  " U " - Analyte was not detected. The result of the analyte is less than the Instrument Detection Limit (IDL).

- Q Qualifier -

  " E " - The reported value is estimated because of the presence of interference. If the 5-fold dilution analysis for one or more analytes is not within 10%, a chemical or physical interference effect must be suspected, and the data for all affected analytes in the samples received associated with that serial dilution must be flagged with an "E" on Form IX-IN and Form I-IN.

  " M " - Duplicate injection precision not met.

  " N " - Spike sample recovery not within control limits.

  " S " - The reported value was determined by the Method of Standard Addition (MSA)

  " W " - Postdigested spike for Furnace AA analysis is out of control limits (85-115%), while sample absorbance is less than 50% of spike absorbance.

  " * " - Duplicate analysis not within control limits.

  " + " - Correlation coefficient for the MSA is less than 0.995.

- M (Method) Qualifier -

  " P " - for ICP

  " A " - for Flame AA

  " F " - for Furnace AA

  " CV "- for Manual Cold Vapor AA

  " C " - for Manual Spectrophotometric

  " NR "- if the analyte is not required to be analyzed

U.S. EPA - CLP

GC/MS CALIBRATION

PROJECT DESCRIPTION: _____

SITE NAME & LOCATION: Novack Sanitary Landfill

SAMPLE GROUP: Leachate Draining Ways Set Two

DATE COLLECTED: 06/28/90 & 07/27/90 MATRIX: Soil & Water

PARAMETERS:

VOCs P

BNAs P

PEST/PCBs N

QC CRITERIA: *

A - Acceptable: Average relative response factor ($\overline{RRF}$) ≥0.05; Percent relative standard deviations (%RSD) ≤30% for initial calibration and percent difference (%D) ≤25% for continuing calibration.

P - Provisional: Some criteria met; data usable as flagged (see *Functional Guidelines*).

U - Unacceptable: Criteria not met; data unusable.

N - Not Applicable.

REMARKS:

VOCs: acetone, 1,2-dichlorobenzene, and vinyl acetate out of control limits for $\overline{RRF}$, %RSD, or both, affecting samples NSLLH1002, SS1002-Rinsate, Trip Blank (Instrument HPS970K). Data flagged "UJ". Bromomethane, bromoform out of control limits for $\overline{RRF}$, %RSD, or both, affecting samples NSLSS1002 and NSLSD902 (Instrument HP5995D). Data flagged "UJ".

AR301635

* Attachments: Form VI and VII (VOCs & BNAs)

BNAs (semivolatiles): 2,4-dinitrophenol; 4,6-dinitro-2-methyl-phenol; di-n-butylphthalate out of control limits for RRF, %RDS, or both, affecting samples NSLSD901, NSLSS1011, and NSLSS1001-Rinsate. Data flagged "UJ" or "J", (Instrument HP5970F).

Benzoic acid; 2,4-dinitrophenol; 3,3'-dichlorobenzidine; pyrene, benzo(k)fluoranthene; benzo(ghi) perylene; terphenyl-d14 out of control limits for RRF, %RSD, or both. Only sample NSLLH1001 affected. Data flagged "J" or "UJ" (Instrument HP5970J).

Semi-Volatiles Calibration Raw Data

Note: Calibrations have been arranged by instrument and in chronological order for ease in tracking and validating.

Pesticide/PCB Evaluation of Instrument Calibration

AR301644

GERAGHTY & MILLER, INC.

LABORATORY DATA VALIDATION
ORGANICS - 5

Pest/PCBs CALIBRATION

PROJECT DESCRIPTION: _____

SITE NAME & LOCATION: Novack Sanitary Landfill

SAMPLE GROUP: Leachate Draining Ways Set Two

DATE COLLECTED: 06/28/90 & 07/27/90 MATRIX: Soil & Water

PARAMETERS:

VOCs N

BNAs N

PEST/PCBs P

QC CRITERIA: *

A - Acceptable: All criteria met in *Functional Guidelines*, Section III, Pesticide Calibration and all standards were analyzed in the 72-hour sequence.

P - Provisional: Some criteria met; data usable as flagged (see *Functional Guidelines*).

U - Unacceptable: Criteria not met; data unusable.

N - Not Applicable.

REMARKS:

4,4-DDT degradation is out of control limits (20%) beginning with check sample #2. LH1001 and SS1001R are affected. Neuterition time shift for DBC is out of control limits for LH1001 and SS1001R. Calibration curves were used in the determination of DDT, DBC, ALDAIN and ENDRIN.

METHOD BLANKS

PROJECT DESCRIPTION: _____

SITE NAME & LOCATION: Novack Sanitary Landfill

SAMPLE GROUP: Leachate Draining Ways Set Two

DATE COLLECTED: 06/28/90 & 07/27/90 MATRIX: Soil & Water

PARAMETERS:

VOCs P

BNAs P

PEST/PCBs A

QC CRITERIA: *

A - Acceptable: No evidence of contaminants above minimum detection limits, no interference with sample results, appropriate blank used for each GC/MS system, extraction method, and analytical system.

P - Provisional: Contaminants present, but minimal interference with sample results; use *Functional Guidelines* 5X or 10X guidelines to assign data qualifier flags.

U - Unacceptable: Gross contamination, too much interference to use data for certain compounds or for the entire fraction; appropriate blanks not analyzed.

N - Not Applicable.

REMARKS:

(see attached)

AR301659

* Attachments: Form IV (All Parameters) and Method Blank analyses

Evaluation of Field Blanks

(Equipment Rinsate)

AR301691

GERAGHTY & MILLER, INC.

FIELD BLANKS

PROJECT DESCRIPTION: _____

SITE NAME & LOCATION: Novack Sanitary Landfill

SAMPLE GROUP: Leachate Draining Ways Set Two

DATE COLLECTED: 06/28/90 & 07/27/90 MATRIX: Soil & Water

PARAMETERS:

VOCs A

BNAs A

PEST/PCBs A

QC CRITERIA: *

A - Acceptable: No evidence of contaminants above minimum detection limit.

P - Provisional: Contaminants present, but minimal interference with sample results; use *Functional Guidelines* 5X or 10X guidelines to assign data qualifier flags.

U - Unacceptable: Gross contamination in blanks indicating poor sampling technique, bottle contamination, air-borne contamination, preservative contamination, or improper handling. Data for batch invalid or suspect.

N -Not Applicable.

REMARKS:

_____

_____

Evaluation of Trip Blank (Volatiles Only)

GERAGHTY & MILLER, INC.

LABORATORY DATA VALIDATION
ORGANICS - 8

TRIP BLANKS

PROJECT DESCRIPTION: _____

SITE NAME & LOCATION: Novack Sanitary Landfill

SAMPLE GROUP: Leachate Draining Ways Set Two

DATE COLLECTED: 06/28/90 & 07/27/90 MATRIX: Soil & Water

PARAMETERS:

VOCs P

BNAs N

PEST/PCBs N

QC CRITERIA: *

A - Acceptable: No evidence of contaminants above minimum detection limit.

P - Provisional: Contaminants present, but minimal interference with sample results; use *Functional Guidelines* 5X or 10X guidelines to assign data qualifier flags.

U - Unacceptable: Gross contamination resulting in compromise to the sample data integrity.

N - Not Applicable.

REMARKS:

Single trip blank, analyzed for volatiles, was found to contain methylene chloride at 6 ug/L, tetrachloroethane at 1 ug/L, and toluene at 5 ug/L. Previously flagged as "B" due to method blank contamination.

AR301703

* Attachments: Refer to data summary table

Evaluation of GC/MS Surrogate Recovery for Volatiles and Semi-Volatiles

AR301706

GC/MS SURROGATE RECOVERY

PROJECT DESCRIPTION: _____

SITE NAME & LOCATION: Novack Sanitary Landfill

SAMPLE GROUP: Leachate Draining Ways Set Two

DATE COLLECTED: 06/28/90 & 07/27/90 MATRIX: Soil & Water

PARAMETERS:

VOCs A

BNAs A

PEST/PCBs N

QC CRITERIA: *

A - Acceptable: No VOCs surrogate recovery or one BNAs surrogate recovery out of QC limits and all percent recoveries (%R) >10%.

P - Provisional: No more than one VOCs surrogate recovery or two BNAs surrogate recoveries out of QC limits and all percent recovery (%R) >10%; or if any percent recovery <10% with results greater than CRQL; data usable as flagged (see *Functional Guidelines*).

U - Unacceptable: Any percent recovery <10% with results less than CRQL; data unusable.

N - Not Applicable.

REMARKS:

Two samples (NSLLH1001 and NLSSS1001R), had recoveries of 111% and 97%, respectively, for D5-phenol, exceeding upper QC limit of 94%.
