ORIGINAL

Blumehart Tire Dump - PA/SI (Final Draft)
Peer Review Comments: Dawn Ostrowski 10/3/84

sec. 3.6, p. 3-4 - There are not an estimated 40 residences within 3 miles of the site. Instead, there are 40 residences within 3 miles which are drawing drinking water from the aquifer of concern (the Chinung formation as defined in the HRS for the site.)

- The number of houses within 3 miles of the site is well over 40. Either count them or omit this info.

SI Form, Part 3, II. C.

Statement contradicts information in HRS, where it was found that "technically" there was no evidence of contamination (lack of background samp

Replace with "quantitative evidence of contamination of an intermittant stream" (unnamed tub to Hogue Run)

Part 3 II G. Population potentially affected should agree with narrative ie 152.
