Investigation of stream pollution complaint received from Mr & Mrs. Henry Swanteck, Lonely Cottage Lane, Box 106, Upper Black Eddy, Pa. (982-5466)
The stream in question seems to originate on M. Derewal's property west of T444. The Swantecks have the creek damed up on their property, thus the effects of any siltation become readily apparent.

We spoke with Mr. Ken Gross and Mrs. Bean at Derewal's property. No obvious pollution was evident. A farm pond constructed for the horses may feed the stream in question & cause murkiness on occasion. Very pungent odors were noticeable on Derewal's premises, especially near the open fields above the pond.

Stream samples were collected at T444 on both streams - one above & one below the Swanteck home. Both field tests & lab analyses are being performed.

North Trib (pH ~ 7.3)			South trib (pH ~ 6.9)
